

WHAT IS CLAIMED IS:

1. A sheet feeder in an image forming apparatus comprising:
a manual sheet supply unit to supply special sheet and sheet
5 other than the special sheet;

a conveying member to convey the special sheet and the sheet
other than special sheet supplied from the manual sheet supply unit
toward an image forming process unit; and

a sheet guide provided between the manual sheet supply unit
10 and the conveying member, having special sheet ribs to control both
sides of the special sheet that is inserted and guided the special
sheet ribs and the sheet other than the special sheet is guided by
passing the upper surface of the special sheet ribs.

15 2. The sheet feeder in an image forming apparatus according
to claim 1, wherein mass of the special sheet is larger than mass of
the sheet other than the special sheet.

3. The sheet feeder in an image forming apparatus according
20 to claim 1, wherein the manual sheet supply unit supplies the
special sheet and the sheet other than the special sheet in a
horizontal direction, and the conveying member conveys the special
sheet and the sheet other than the special sheet in a vertical
direction.

25 4. The sheet feeder of in image forming apparatus according to

claim 1, wherein the sheet guide further has a pressing member between the special sheet ribs supports back of the sheet other than the special sheet by pressing and descends when the special sheet is inserted between the ribs.

5

5. The sheet conveying apparatus in an image forming apparatus according to claim 4, wherein the pressing member is made of a compressed MylarTM that descent by an empty weight of the special sheet when the special sheet is inserted.

10

6. A sheet feeder in an image forming apparatus comprising:
a manual sheet supply unit to supply special sheet and sheet other than the special sheet on a manual sheet supply tray;
aligning rollers to align the leading edges of the special sheet
15 and othe sheet other than the special sheet supplied from the manual sheet supply unit and convey in the image forming direction; and

15

a sheet guide provided between the manual sheet supply unit and the aligning rollers, having special sheet ribs to control both
20 sides of the special sheet that is inserted and guided between the special sheet ribs and the sheet other than the special sheet is guided by passing the upper surfaces of the special sheet ribs.

20

7. The sheet feeder in an image forming apparatus according
25 to claim 6, wherein mass of the special sheet is larger than mass of the sheet other than the special sheet.

8. The sheet feeder in an image forming apparatus according to claim 6, wherein the manual sheet supply unit supplies the special sheet and the sheet other than the special sheet in a horizontal direction, and the aligning rollers convey the special sheet and the sheet other than the special sheet in a vertical direction.

9. The sheet feeder in an image forming apparatus according to claim 6, wherein the sheet guide further has a pressing member between the special sheet ribs supports back of the sheet other than the special sheet by pressing and descends when the special sheet is inserted between the ribs.

10. The sheet feeder in an image forming apparatus according to claim 9, wherein the pressing member is made of a pressing Mylar™ that descent by an empty weight of the special sheet when the special sheet is inserted.
